Helpful tips:
Aero, Vista, Duo

Keys

Vehicle key

Habitation key

Do not leave keys in the ignition.

Have keys on person at all times.

Ensure both the driver's cab and the habitation area are locked when unaccompanied.

Sockets

Mains power must be connected to operate.

Mains Power

Electric hookup point

Plug in at campsite

Connect the mains power by plugging in at a campsite using your hookup cable.

Turn off all appliances prior to disconnecting from mains power.

Remember to unplug the hookup cable prior to driving away.

Grey/Waste water

Check waste water level

Waste water release valve

Disposal point

Check waste water levels on the control panel.

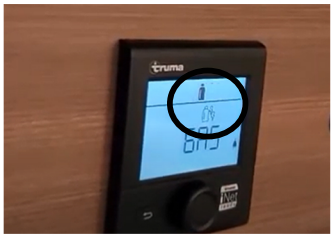
Empty waste water before the tank is full.

Only empty waste water at an authorised spot.

Look for a waste disposal symbol at a campsite.

Heating & hot water

Ensure main control panel is switched on



Select source (gas/electricity/mix)

Select heating or hot water

Ensure gas or mains electric is connected, wait 40 minutes.

Turn off all systems (gas, heating, hot water, vent), on the Truma system before disconnecting the electric or closing the gas valve.

Make sure any windows are closed for heating to work.

Toilet

Switch on water pump

Open toilet lever

Flush toilet & close lever

Fill the toilet with a small amount of water before use.

Toilet cassette

Remove cassette

Swivel arm, remove cap & press button

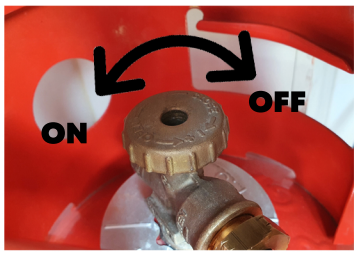
Only empty the toilet at an authorised waste disposal station.

Once emptied, add chemicals into the open toilet cassette.

Ensure toilet cassette clicks into place when putting it back in the motorhome.

Ensure toilet is emptied and clean before returning the vehicle.

Gas



Gas operation

Green Button

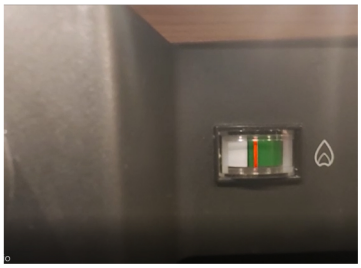
Vehicle must be level for gas appliances to work.

Turn gas off before driving.

After turning the gas on, press the green button for 5 seconds to start the flow of gas.
(Pigtails with green button only)

Fridge

Choose power source (electric/gas/battery)



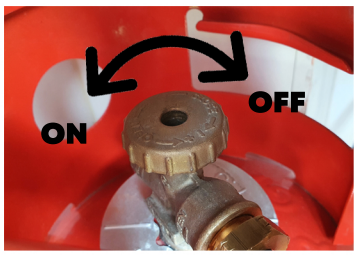
Ensure gauge is in green zone if using gas

Battery source only works when engine is running. This option only maintains temperature and does not chill fridge.

Overfilling the fridge impacts performance.

Do not put heavy items in the door.

Gas hob for cooking



Turn on gas

Rotate gas knob & hold in whilst pressing ignite button

If hob doesn't ignite, use a lighter.

Ensure gas bottle has plenty of gas.

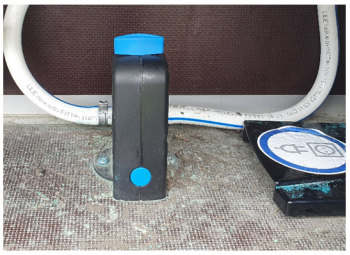
Vehicle must be level for gas to work.

Ensure window above the hob area is open when cooking.

Wait 15-20 minutes for hob to cool before closing lid.

Frost protection

Frost protection activated position



Valve closed /reset position

In cold temperatures the water in the boiler and connecting pipes (and fresh water when the pump is on) will drain to protect the pipes from freezing.

Turn heating on to get van above 7°C, reset the frost protection by moving the valve to close position and pressing button to reset.

Windows

Push button & twist handle

Push out to release strut to allow window to close

Close all hinged windows & skylights before driving.

To close hinged windows, push the whole way out/open until the strut releases.
